

IQBAL MAULANA FAJAR

FRONTEND ENGINEER INTERN

Yogyakarta, DIY 0851-5851-1646 iqbalmaulanafajar36@gmail.com

TECHNICAL SKILLS

Frontend

- HTML5
- CSS3
- JavaScript
- Vue.js (Vite)
- Responsive Web Design
- Component-Based Development

Currently Learning

- React.js
- Next.js
- TypeScript
- Automated E2E Testing

API & Backend

- REST API Integration (Axios)
- Laravel
- PHP
- MySQL

Testing & Debugging

- Manual Testing
- Debugging
- Software Testing Concepts

Tools

- Git & GitHub
- Figma
- Visual Studio Code
- Vercel (Deployment)
- XAMPP
- Python (Jupyter/Colab)

SOFT SKILLS

- Problem Solving
- Teamwork & Collaboration
- Communication
- Attention to Detail
- Adaptability
- Willingness to Learn
- Open to Feedback

PROFILE

Final-year Informatics student at Universitas Amikom Yogyakarta who builds and deploys web applications with Vue.js, Laravel, and MySQL, backed by a strong foundation in HTML, CSS, and JavaScript. Experienced in turning requirements and UI designs into component-based interfaces, integrating REST APIs with Axios, debugging, and collaborating through Git/GitHub. Actively learning React.js, Next.js, TypeScript, and automated E2E testing. Open to feedback and available for an internship.

EDUCATION

Universitas Amikom Yogyakarta — 2023 – Present

S1 Informatics (Final-year student)

Relevant Coursework: Web Programming · Database Systems · Software Engineering · UI/UX Design · Artificial Intelligence · Big Data & Data Mining

PROJECT EXPERIENCE

DemonTix – Ticket Sales Web App — 2024

Frontend & Web Development Project

- Built the Vue.js frontend for a concert, sports, and tourism ticket platform: event catalog, event detail, login, register, and navigation pages.
- Consumed the Laravel REST API with Axios, used SweetAlert2 for user feedback dialogs, and organized pages into reusable components.
- Developed the Laravel + MySQL backend for users, events, tickets, and transactions, including payment-proof and event image uploads.
- Collaborated in a team using Git/GitHub (100+ commits in the repository); tested and debugged features throughout development.

Sew U – Digital Platform for Tailors — 2026

Landing Page & Dashboard Project

- Built a SaaS landing page and business dashboard (orders, customers, portfolio, reports) using HTML, CSS, and JavaScript.
- Implemented an interactive Smart Outfit Matching demo that recommends top and bottom colour combinations from user selections.
- Organized landing, dashboard, admin, and API files in one project and deployed it to Vercel.

Responsi – Vue.js Application — 2025

Frontend Project

- Developed a Vue.js (Vite) frontend paired with a separate API layer in one repository (38 commits).
- Deployed the application to Vercel for online access.

Database, Data Mining & Coursework Projects — 2023 – 2025

Academic Projects

- Designed a MySQL database (relations, CRUD, functions, procedures, triggers, views, indexes) and built a web-based information system with user authentication.
- Built a laptop price prediction model using Linear Regression in Python (Jupyter Notebook) for a data mining course.
- Completed web programming practicals in HTML, CSS, and JavaScript; collaborated with teammates on task distribution and delivery.
